Profile

Experienced, senior **Python** programmer from the Netherlands with an affinity for (software) security. Fluent in English and Dutch. Looking for a position that touches on security and open source or embedded hardware.

Skills

I have extensive experience with **Python** and a solid understanding of **Go, PHP,** and **C**. My frontend abilities include **HTML**, **CSS**, and **JavaScript**.

In a non-professional capacity I also have experience with **Rust**, **Nim***,* and **C++.**

Very much at ease on the **Linux** and **FreeBSD** command lines, I have managed and maintained systems running both of these in professional capacity and under high traffic in a redundant and safe manner.

Confident with the **git**, **SVN**, and **mercurial** version control systems.

Tooling wise I've worked with **JIRA**, **BitBucket**, **GitHub**, and various other support systems.

Experience

Some Function, Some Company – 2022-now
At Some Company I worked on the Some Team. This team focuses on providing a reproducible way to compose Linux distributions in various formats (installation media, disk images, etc). We were responsible for building the official X, Y, and Z images.

My own contributions mostly focused on the lower level implementation of our sandbox: the ability to declaratively specify adjustments to the image being built in a reproducible way. **Go, Python, Rust.**

Some Function, Some Company – 2016-2022
Responsible for building CTF security challenges leading a team of four. Due to the nature of building these I have widespread experience and have touched many different languages and systems. I gained security domain knowledge and established demanding specifications for separation and infrastructure. **Python, C, PHP, CSS, HTML, JavaScript.**

Some Function, Some Company – 2011-2016
Bespoke websites for variously sized clients. Maintained a shared hosting infrastructure for clients. **PHP, Python, HTML, CSS, JavaScript.**

Some Function, Some Company – 2008-2011

Product development for an identity management system used by the Dutch Government and various other large companies. Custom implementations and framework development. **ColdFusion, Java, CSS, HTML.**

Some Function, Some Company – 2005-2008

Worked on various custom built webshops. Responsible for internal framework development and customisation for specific use cases. **PHP**, **MySQL, CSS, HTML.**

Open Source

bpython

A colourful REPL for the **Python** programming language, I have contributed the GTK part (now defunct) and various other fixes and features.

pinnwand

Pastebin software written in **Python** using the **Tornado** framework. Used across various organisations, IRC channels, and intranets.

Other open source contributions can be found on my website and GitHub profile
